Summary

Professional software engineer with 10+ years of experience specializing in backend development and product delivery. Strong C# and .NET expertise gained from working on enterprise SaaS platforms. Demonstrated ability to take ownership of complex features, optimize performance, and implement infrastructure improvements. Actively expanding knowledge in modern software architecture patterns including Clean Architecture, Domain-Driven Design, and cloud technologies. Product-focused engineer who values code quality, enjoys mentoring team members, and is working toward Senior Engineer role through technical growth and increased scope of responsibility.

Technical Skills

Languages & Frameworks: C# (strong), .NET Core, ASP.NET, ASP.NET MVC, REST API, JavaScript, TypeScript

Cloud & Deployment: Azure (Cosmos DB, Service Bus, Static Web Apps, DevOps), Git, Azure DevOps

Databases: SQL Server, Cosmos DB, Entity Framework

Currently Learning: Clean Architecture, Domain-Driven Design, Microservices patterns, Go, React, Blazor WebAssembly, Docker

Development Practices: Agile/Scrum, Unit Testing (xUnit, Moq), CI/CD, Code Review, Performance Optimization, Structured Logging (Serilog)

Professional Experience

Software Engineer

The Access Group (Eploy) | October 2019 - Present

Backend engineer on an award-winning Applicant Tracking System and Talent CRM serving 350+ enterprise customers. Contribute to feature development, performance optimization, and infrastructure improvements. Take ownership of complex features and actively participate in technical discussions while working toward Senior Engineer role.

Key Achievements (2025):

- **Structured Logging Infrastructure:** Architected and implemented enterprise-wide structured logging system using Serilog with Cosmos DB sink, enabling scalable telemetry for 350+ customers. Conducted Azure cost analysis and designed auto-provisioning strategy. Created comprehensive documentation and established interest group to drive adoption across teams.
- **Performance Optimization:** Developed generic bulk upsert functionality using FastMember, achieving 120x performance improvement and enabling efficient processing for multi-recurring slots feature. Implemented across Actions, Activity Log, and Ownership modules with comprehensive unit tests.
- **Automation Architecture:** Participated in architectural discussions for building state machine automation workflows. Gained first exposure to message bus infrastructure (Azure Service Bus). Created flow diagrams to help visualize technical approach and align team understanding.
- **Database Resilience Improvements:** Implemented batch deletion in base data layer, significantly reducing locking issues and improving resilience during mass delete operations across the platform.
- **Complex Feature Development:** Delivered recurring slots feature as first-time feature champion, implementing well-architected reusable solution with

comprehensive unit testing. Extended to multi-recurring slots with 200+ test cases, demonstrating attention to quality and edge case handling.

- **Planning Poker Application:** Quickly built planning poker tool with risk/impact matrix in one day, immediately adopted by development team for backlog refinement sessions. Increased refinement effectiveness and team engagement through clear voting visualization.
- **Portal Branding System:** Independently implemented hiring manager and employee portal branding logic with third-party theme integration. Took ownership of unplanned work, identified requirements, and delivered complete solution including Access integration.
- **Code Quality & Testing:** Major contributor to pushing unit testing adoption across the team. Implemented comprehensive tests for recurring slots features with over 200 test cases. Utilized Moq for effective mocking in end-to-end testing scenarios.
- **Dev Review Lead:** Served as Dev Review lead when needed, efficiently triaging tickets and maintaining code quality standards.

Technologies: C#, .NET Core, ASP.NET MVC, REST API, SQL Server, Azure (Cosmos DB, Service Bus, DevOps), Serilog, Entity Framework, xUnit, Moq, Git

Frontend Developer

Eastside Co | June 2019 - October 2019

Developed bespoke features for multiple Shopify e-commerce websites, extending CMS capabilities with custom functionality. Gained expertise in modern frontend technologies including SASS, HTML5, and JavaScript.

Developer

NetLynk Direct | August 2016 - June 2019

Full-stack developer for Plusnet mobile and TalkTalk websites using ASP.NET MVC. Built bespoke CMS for content management. Developed skills in C#, HTML, CSS, SEO optimization, Bootstrap, SVN version control, and JavaScript.

Apprentice C# Developer

Wapple | August 2015 - August 2016

Foundation year learning C#, XAML, Entity Framework, and C++. Gained experience with Unity game engine, Microsoft Visual Studio, Windows Universal Platforms, and Windows 8.1 development.

Personal Projects & Interests

- **Portfolio Site:** TheLemic.co.uk - Personal portfolio site built with Blazor WebAssembly, demonstrating modern .NET frontend capabilities and deployed to Azure Static Web Apps.
- **D&D Wiki:** dnd.thelemic.co.uk - Comprehensive D&D campaign wiki built with Quartz, showcasing technical writing and documentation skills. Active Dungeon Master spending 5-8 hours weekly on campaign preparation and gameplay.
- **Continuous Learning:** Actively expanding technical knowledge through personal projects exploring Clean Architecture, Domain-Driven Design, React, and Go programming. Reading technical literature and building proof-of-concept applications to deepen understanding of enterprise architecture patterns.

Friendly, collaborative team player who values strong company culture and continuous learning. Passionate about writing clean, maintainable code. Enjoys archery, ballroom dancing, rockclimbing, boardgames and running tabletop RPG campaigns.

Looking for a company that values continuous learning and professional development, with hybrid working arrangements and flexible core hours to support work-life balance. Thrives in relaxed, collaborative environments with strong technical teams.
